

Multimodal Framing Analysis: Tasks, Instructions, Annotation Guidelines

Many authors

June 2026

1 Introduction

2 Tasks

2.1 Framings in Text (Subtask 1)

2.1.1 Definition:

Given a text of a news article segmented into paragraphs, the goal is to identify zero or more framings conveyed by each paragraph in the text from a predefined taxonomy of framings. This is a multi-label text classification task. An example is provided in Figure 1.

2.1.2 Evaluation:

We use multi-label Micro F_1 . The corresponding Macro F_1 will be computed as a complementary measure.

2.1.3 Baseline model(s):

JP: TODO

2.1.4 Ground truth format

The format of the ground truth for each input document has the following format. Each line represents annotations for one paragraph, and contains the following elements separated by tabs:

```
<start-char-position> <end-char-position> <framing-dimension>*
```

Each paragraph can be associated with zero, one or more framing dimensions. The framing dimension labels are separated by tabs as well.

On top of this, there should be one file with an aggregation of all annotations, which has a similar format with an addition of the file names of the raw documents, i.e., using the following format:

```
<file-name> <start-char-position> <end-char-position> <framing-dimension>*
```

2.2 Framings in Images (Subtask 2)

2.2.1 Definition:

Given the text of a news article and an accompanying image, the goal is to identify zero or more framings conveyed by the image from a predefined taxonomy of framings. This is a multilabel image classification task. There are two variants of this task:

- access to human-labeled (gold-standard) framings for the text is provided
- no access to human-labeled (gold-standard) framings for the text

An example is provided in Figure 1.

TITLE: Epstein files with claims against Trump released

BODY: The US Justice Department released FBI records on Thursday that summarise interviews of an unidentified woman in which she made accusations against President Donald

Trump**CRIME & PUNISHMENT** related to an alleged sexual encounter. The newly disclosed records, which were posted on the department's website on Thursday, show she claimed Trump attempted to force president in New York or New Jersey in the 1980s when she was between 13 and 15 years old.

The White House did not immediately respond to questions about the disclosures. Politico, which first reported the disclosures, said White House press secretary Karoline Leavitt called the woman's claims "completely baseless accusations, backed by zero credible evidence."

The Justice Department said in a post on the social media platform X that the records it released Thursday were among 15 documents that it had "incorrectly coded as duplicative" and not published as a result.

Democrats have accused Trump's administration of concealing records related to Trump**POLITICAL**, and a committee in the House of Representatives voted to subpoena Attorney General Pam Bondi so lawmakers can question her about how the government is handling the disclosures.

IMAGE 1

IMAGE 2

Annotation:

Subtask 1 - Text Framings: Crime and Punishment, Political

Subtask 2 - Image 1 Framings: Public Opinion

Subtask 2 - Image 2 Framings: Political

Figure 1: An input article, 2 images which could be associated with it, and corresponding annotations. Specific framing evidence in text is highlighted in blue. The text fragments highlighted in blue provide evidence of specific framings.

Economic: costs, benefits, or other financial implications
Capacity and resources: availability of physical, human or financial resources, and capacity of current systems
Morality: religious or ethical implications, considerations, issues, etc.
Fairness and equality: balance or distribution of rights, responsibilities, and resources
Legality, constitutionality and jurisprudence: rights, freedoms, and authority of individuals, corporations, and government
Policy prescription and evaluation: discussion of specific policies aimed at addressing problems, needs, issues, etc.
Crime and punishment: effectiveness and implications of laws and their enforcement
Security and defense: threats to welfare of the individual, community, or nation
Health and safety: health care, sanitation, public safety
Quality of life: threats and opportunities for the individual’s wealth, happiness, and well-being
Cultural identity: traditions, customs, or values of a social group in relation to a policy issue
Public opinion: attitudes and opinions of the general public, including polling and demographics
Political: considerations related to politics and politicians, including lobbying, elections, and attempts to sway voters
External regulation and reputation: international reputation or foreign policy of the U.S.

Figure 2: Framing dimension taxonomy.

2.2.2 Evaluation:

We use multi-label Micro F_1 . The corresponding Macro F_1 will be computed as a complementary measure.

2.2.3 Baseline model(s):

The baseline model is a pre-trained VLM (Qwen3-VL-4B-Instruct) prompted using the image framing template from Arora et al. (2025) modified to include the full article text. The baseline is trained using few-shot finetuning with LoRA on a sample of 100 datapoints from the manually annotated set introduced in Arora et al. (2025) and it is evaluated on a sample of 300 datapoints from the same set.

[include table]

2.2.4 Ground truth format

The format of the ground truth for each input document has the following format. Each line represents annotations for one image, and contains the following elements separated by tabs:

```
<framing-dimension> <free-text explanation>
```

On top of this, there should be one file with an aggregation of all annotations for this subtask, which has a similar format with an addition of the file names of the raw documents, i.e., using the following format:

```
<file-name> <framing-dimension> <free-text explanation>
```

3 Framing Taxonomy

We exploit the framing taxonomy introduced in Card et al. (2015), which is depicted in Figure 2.

4 Collection and preparation of input data

When preparing input data for annotation please adhere to the following instructions.

4.1 Subtask 1

For preparing news article for annotation:

- the plain text version of news articles should be stored in a file with UTF-8 encoding;

- the first line should be the title of the article;
- the text of the news article is divided into paragraphs, where the paragraphs are delimited by empty lines (one or more empty lines);
- make sure an article does not consist of just one paragraph;
- use the following naming convention for the files with news articles: two-letter code for the language, followed by underscore, followed by one letter indicating the type of media (M - mainstream, D - disinfo), followed by underscore, followed by one of the values: TRAIN, TEST depending on the purpose, followed by an underscore, and then by a unique identifier. For example, RU_D_TRAIN_doc1 would indicate a news article in RU from disinformation source, used for training dataset. The file should have `.txt` extension.

4.2 Subtask 2

For preparing the files for Subtask 2 a ZIP archive needs to be prepared which contains the following items:

- a HTML version of the news article text prepared for Subtask 1 using the template stored here: **JP:** https://drive.google.com/drive/folders/1Y0xTSTHS0FG4CXQcd0HH6Wc5jQffruP5?usp=drive_link.
- the HTML file should be named `index.html`
- the image in any of the following formats: jpeg (jpg), png, webp, gif whose name is referenced from the HTML document; the minimum resolution on the shortest side of the image should be 512 px and the maximum size on the longest side should be 2048 px.
- the name of the file with the image should be identical with the corresponding text of the news article, except different extension, e.g., `RU_D_TRAIN_doc1.png` which would correspond to `RU_D_TRAIN_doc1.txt`

Once the ZIP archive is created it should be named by concatenating the name of the text file (Subtask 1) with `.zip` extension. For instance, the archive corresponding to the news article plain text called `RU_D_TRAIN_doc1.txt` should be named `RU_D_TRAIN_doc1.zip`

5 Annotation Guidelines

5.1 Framings in Text

In the context of the task at hand, we refer to the definition of framing introduced in Card et al. (2015): ‘*To frame is to select some aspects of a perceived reality and make them more salient in a communicating text, in such a way as to promote problem definition, causal interpretation, moral evaluation, and/or treatment recommendation for the item described.*’.

Please adhere to the following rules when annotating frames in text:

1. Framing dimension annotation is done at the paragraph level.
2. One should identify what the main topic of the news article is (e.g., some event, activity, initiative, phenomenon, entity, etc.), and consequently identify the frames related to that topic.
3. The title (first line in the text) should be annotated separately provided that framing evidence is present therein.
4. Go through all paragraphs, identify all framing dimensions used in each, and select and annotate ONE text fragment (there could be many such text fragments) for each framing dimension identified as an evidence.
5. When annotating the text fragments at paragraph level there is no need to follow any specific rules as regards the boundaries of the text annotated since the annotation will be propagated to the entire paragraph. Hence, do not invest much time in deciding about the borders of the text span to annotate.

6. It is NOT necessary to annotate more than one text fragment at paragraph level per framing dimension, and it is also irrelevant which particular text fragment (there could be many) that constitutes evidence of using specific framing is chosen for annotation.
7. If no frames are identified within a paragraph, no annotations should be made in this paragraph.
8. Framings within quotations of some person cited within the news article are to be considered for annotations as well, i.e., they should not be ignored when reading the text.
9. Framing annotations can be enriched by providing a free-text explanation in the corresponding free-text slot, but this is not mandatory for text framings, and/or can be potentially used to describe the motivation in the context of edge cases or uncertainty.
10. Each document should be assigned a main topic. For this purpose **Main Topic** layer should be used, and an arbitrary text marked and a free-text slot used to provide free-text description (can be in the native language).

An example of a text with annotation of three framing dimensions is shown below (Policy Prescription - yellow, Cultural Identity - orange, Economic - green).

Example:

Main Topic:

Critics of illegal immigration can make many cogent arguments to support the position that the U.S. Congress and the Colorado legislature must develop effective and well-enforced immigration policies that will restrict the number of people who migrate here legally and illegally. It's true that all forms of immigration exert influence over our economic and cultural make-up. In some ways, immigration improves our economy by adding laborers, taxpayers and consumers, and in other ways immigration detracts from our economy by increasing the number of students, health care recipients and other beneficiaries of public services. Some economists say that immigrants, legal and illegal, produce a net economic gain, while others say that they create a net loss. There are rational arguments to support both sides of this debate, and it's useful and educational to hear the varying positions.

The remainder of this section provides the complete list of framing dimensions, which are accompanied by examples. The text fragments highlighted in yellow are evidence of using certain framing.

5.1.1 Economic

This type identifies parts of the articles referred to costs, benefits or other financial implications (to an individual, family, organisation, community or to the economy as a whole).

Example:

Main Topic: Migration

Critics of illegal immigration can make many cogent arguments to support the position that the U.S. Congress and the Colorado legislature must develop effective and well-enforced immigration policies that will restrict the number of people who migrate here legally and illegally. It's true that all forms of immigration exert influence over our economic and cultural make-up. In some ways, immigration improves our economy by adding labourers, taxpayers and consumers, and in other ways immigration detracts from our economy by increasing the number of students, health care recipients and other beneficiaries of public services. Some economists say that immigrants, legal and illegal, produce a net economic gain, while others say that they create a net loss. There are rational arguments to support both sides of this debate, and it's useful and educational to hear the varying positions

Example:

Main Topic: Head of Japan's Central Bank

The head of Japan's central bank is a very patient individual. When Haruhiko Kuroda became governor of the Bank of Japan (BOJ) nine years ago, he pledged that he would rid the world's third-largest economy of the deflationary pressures that had helped keep growth slow ever since 1990. His goal was to pump in enough money to create a 2 percent inflation rate that would raise wages and spending power. With commodity price inflation raising alarms globally, he finally looks set to achieve his goal. While the latest data is highly volatile, economists predict that Japan will finally start to see a 2 percent inflation rate—and possibly more—in upcoming months. So far the figures remain tame by global standards. While the U.S. Consumer Price Index rose by 8.5 percent in March compared to a year earlier, the highest rate of increase since 1981, Japan's index was up just 1.2 percent. But that includes a 52.7 percent fall in mobile phone charges after a government crackdown on the three-company cartel that virtually controls the sector. Other figures were eye-popping by Japan standards.

Energy costs jumped 20.8 percent, the steepest rise since 1981, while cooking oil increased 34.7 percent. *Another measure of inflation at the wholesale level, the Corporate Goods Price Index jumped 9.5 percent year-on-year in March, due in part to the dire situation in Ukraine.*

5.1.2 Capacity and Resources

This type identifies parts of the articles referring to the availability of physical, human, geographical, spatial or financial resources required to solve a problem, tackle an issue or support an initiative/activity, and the capacity of current systems (e.g., healthcare, education, etc.) to handle a task.

Example:

Main Topic: Lab-grown meat and insects

*Dining on the likes of **lab-grown meat or ground-up insects could lead to big savings in carbon emissions and water, as well as freeing up land for nature**. That's the finding of a study calculating the environmental benefits of "greener" foods hitting our plates. Scientists say pressures on the planet could fall by more than 80% with such foods, compared with the typical European diet. But it's not yet clear if consumers will want to shift their eating habits. A host of non-conventional foods are being developed with the aim of providing food rich in protein and other nutrients, while being gentle on the planet by using less water and land. Scientists in Finland studied the nutritional profile of some of these products and looked at three measures of environmental pressure: the use of water, land and potential carbon emissions.*

5.1.3 Morality

This type identifies parts of the articles referring to religious, moral, societal or ethical implications, considerations, issues, and aspects of a topic, initiative or action.

Example:

Main Topic: relationship between India and Pakistan

*In a development, a group of eminent pro-democracy intellectuals, politicians, journalists and activists have urged the new government in Pakistan to work towards better ties with India and other neighbouring countries. The group asked the Shehbaz Sharif regime to play a constructive role in **defusing ethnic and religious conflicts**, and strive for improved relations with the border nations. The group further noted that international relations were important to rebuild the country's economy and resolve other issues like terrorism. The groups of eminent pro-democracy intellectuals, politicians, journalists and activists were speaking at a virtual conference organised by the South Asians against Terrorism and for Human Rights (SAATH) when they urged the new government to take action on the front. The group noted that the new regime formed after Imran Khan's exit as the PM should immediately engage with Baloch nationalists too. It said that the Sharif regime must find an "amicable" solution to violence in restive Baluchistan*

province.

5.1.4 Fairness and Equality

This type identifies parts of the articles referring to the balance or distribution among individuals or groups of rights, responsibilities, rewards, punishment and resources.

Example:

Main Topic: Covid-19 consequences

The echoes of the global pandemic are likely to ring on for years longer because governments have failed to tackle it together, finds a major new analysis that raises troubling questions for the climate crisis. A report just released by the International Science Council – a group made up of 200 bodies and led by New Zealand's former chief scientist, Professor Sir Peter Gluckman – explored three possible pandemic scenarios over the next five years. In the most likely of those, by 2027, Covid-19 will have become an endemic disease worldwide – and still be driving seasonal surges requiring updated vaccines and boosters.

Most of the planet's unvaccinated population would still be concentrated in low-income states, where health systems could risk collapse and food security will have worsened. *With recovery efforts spread unevenly between countries – and high-income countries' high vaccine uptake and access to antivirals sparing them from further major waves – the report painted a grim picture of exacerbated inequality across every part of society. In a yet more pessimistic 2027 scenario, less than 70 per cent of the world's population would be vaccinated – and hard measures like regional lockdowns and work-from-home policies would still be a reality in some countries. The world still faced damaging social upheaval in the form of long-term school closure and unemployment, while growing nationalism would hinder efforts to vaccinate the world and give rise to further conflict. Even amid a worsening climate crisis, many countries would move to reverse environmental reforms in attempts to overcome Covid-19's economic impact. Under the third and most optimistic scenario, global collaboration would have rendered Covid-19 a more manageable disease, and no longer an "acute priority". Vaccines were spread more equitably across the globe – covering more than 80 per cent of the population – while schools were no longer disrupted and restrictive health measures weren't needed.*

5.1.5 Legality, Constitutionality and Jurisprudence

This type identifies parts of the articles referring to rights, freedoms, and authority of individuals, corporations, and governments granted or imposed through Constitution and legislation.

Example:

Main Topic: US sanctions on Cuba

US officials have announced plans to ease tough sanctions imposed on Cuba by former President Donald Trump. Under new measures approved by the Biden administration, restrictions on family remittances and travel to the island will be eased. The processing of US visas for Cubans will also be speeded up. State Department spokesman Ned Price said the move would allow Cuban citizens to pursue a life free from "government oppression". The loosening of sanctions will see a cap on family remittances - funds sent by migrants in the US to family members in Cuba - removed.

Previously migrants were prevented from sending more than \$1,000 (£811) every three months. *Donations to non-family members will also be permitted under the new plans. But US officials emphasised that they will seek to ensure such payments don't reach "those who perpetrate human rights abuses" by using civilian "electronic payment processors". They also said that no bodies will be removed from the Cuba Restricted List, a State Department register of companies linked to the communist government in Havana with whom US citizens are barred from doing business.*

5.1.6 Policy Prescription and Evaluation

This type identifies parts of the articles referring to discussion of specific policies aimed at addressing problems and facilitating initiatives, e.g., discussing their effectiveness and potential impact.

Example:

Main Topic: illegal migration

*Critics of illegal immigration can make many cogent arguments to support the position that the U.S. Congress and the Colorado legislature must develop **effective and well-enforced immigration policies** that will restrict the number of people who migrate here legally and illegally. It's true that all forms of immigration exert influence over our economic and cultural make-up. In some ways, immigration improves our economy by adding labourers, taxpayers and consumers, and in other ways immigration detracts from our economy by increasing the number of students, health care recipients and other beneficiaries of public services. Some economists say that immigrants, legal and illegal, produce a net economic gain, while others say that they create a net loss. There are rational arguments to support both sides of this debate, and it's useful and educational to hear the varying positions.*

Example:

Main Topic: Alaska Oil resources

*The Biden administration on Monday overturned a controversial Trump-era policy that would have opened new swathes of Arctic Alaska to oil development. The Bureau of Land Management, part of the Department of Interior, resurrected **Obama-era management policies** in the National Petroleum Reserve in Alaska, a 23-million-acre (9.3 million hectare) area on the western side of Alaska's North Slope. Alaska's oil production has been declining for decades and reached a 45-year low last year. Those reinstated policies, contained in a plan presented in 2013, allow oil leasing in about half of the reserve while boosting protections for areas considered important to the Arctic ecosystem and to indigenous residents.*

5.1.7 Crime and Punishment

This type identifies parts of the articles referring to the effectiveness and the implications of laws and their enforcement. Includes stories about enforcement and interpretation of laws by individuals and law enforcement, breaking laws, loopholes, fines, sentencing and punishment. Increases or reductions in crime.

Example:

Main Topic: Innovation in the Indian bio-pharmaceutical sector

In November 2021, Prime Minister Mr. Narendra Modi inaugurated the first Global Innovation Summit of the pharmaceutical sector. The summit will have 12 sessions, wherein national and international speakers will deliberate on a range of subjects, including regulatory environment, funding for innovation, industry-academia collaboration, and innovation infrastructure. To achieve self-reliance and minimise the country's import dependency for essential bulk drugs, the Department of Pharmaceuticals had initiated the PLI Scheme to promote domestic manufacturing by setting up greenfield plants with minimum domestic value addition in four separates 'Target Segments' with a cumulative outlay of Rs. 6,940 crore (US\$ 951.27 million) from FY21 to FY30. In June 2021, Finance Minister Ms. Nirmala Sitharaman announced an additional outlay of Rs. 197,000 crore (USD 26,578.3 million) that will be utilised over five years for the Production Linked Incentive (PLI) Scheme in 13 key sectors such as domestic production of active pharmaceutical ingredients (APIs), drug intermediaries and key starting materials. On March 29, Union Health and Chemical and Fertilisers Minister Mansukh Mandaviya announced that of the 53 drug raw materials for which India was dependent on imports, 35 are now being manufactured in India under the PLI Scheme. Strong IP laws is the panacea. The constant increase in the size of the Indian pharmaceutical market due to changing lifestyle and high demand for quality healthcare makes this sector as one of the promising contributors to the Indian economy. Strong IPRs

will induce companies to introduce more advanced products, spur innovation globally and foster more rapid economic growth. The regulatory policies need to be improved, especially for patents and price control, to boost the growth and project India as the destination for the new generation pharmaceutical market. **With strong IP laws, the chances of counterfeit drugs reaching the market are**

considerably lower as these laws provide greater means of tracking the supply chain through trademarks, trade secrets, and licensing agreements. This allows greater quality control and helps manufacturers retain public confidence in their products. Also, firms marketing patented products earn high margins that enables them to plough back more resources into R&D and come up with more useful discoveries.

5.1.8 Security and Defence

This type identifies parts of the articles referring to any security-related threats to welfare of the individual, family, group, community, or nation. In particular, Security and Defence framing focuses on protection against **external threats** and conflicts, e.g., defending borders, nations, resources and systems from hostile actors and attacks.

Example:

Main Topic: Finland and Sweden request to enter NATO

At a news conference on Monday, Mr Erdogan said Turkey opposed the Finnish and the Swedish bids to join Nato, describing Sweden as a "hatchery" for terrorist organisations. "Neither of these countries have a clear, open attitude towards terrorist organisation. How can we trust them?" the Turkish president said. Turkey accuses **the two Nordic nations of harbouring members of the Kurdistan**

Workers' Party (PKK), a group it views as a terrorist organisation, and followers of Fethullah Gulen, who Ankara accuses of orchestrating a 2016 coup attempt. All member states must agree that a new country can join Nato, therefore Sweden and Finland require Turkey's support in their bid to join the military alliance. Mr Erdogan said Swedish and Finnish delegations should not bother going to Ankara, Turkey's capital, to convince it to approve their Nato bid. His government has also pledged to block applications from countries that have imposed sanctions on it. In 2019, both Nordic nations slapped an arms embargo on Ankara after its incursion into Syria. Speaking in parliament in Helsinki on Monday, Finnish Foreign Minister Pekka Haavisto said he was surprised by Turkey's stance, but added that his government was not interested in "bargaining" with Mr Erdogan. Finland formally announced its bid to join Nato last week. It was joined by neighbour Sweden on Saturday in a move that will end the Scandinavian country's centuries-long military non-alignment. "Nato will strengthen Sweden, Sweden will strengthen Nato," Prime Minister Magdalena Andersson said at a briefing on Monday. She said Europe was now living in a dangerous new reality, referring to Russia's invasion of Ukraine. "We are leaving one era behind us and entering a new one," Ms Andersson told lawmakers during a debate in Stockholm, also on Monday.

Example:

Main Topic: Smart farm machinery

Smart technology is increasingly being used to make farms more efficient and productive - for example, until now the labour-intensive harvesting of delicate food crops such as asparagus has been beyond the reach of machines. The latest generation of agricultural robots use artificial intelligence, minimising human involvement. They may help to plug a labour shortage or increase yield, but fear of the inherent security risk is growing, adding to concern over food-supply chains already threatened by the war in Ukraine and Covid. Chris Chavasse, the co-founder of Muddy Machines, which is trialling an autonomous asparagus-harvesting robot called Sprout, said: "There is a real risk that people anywhere in the world could try and take control of these machines," he said. "To get them to do whatever those people want, or just prevent them from operating." He said potentially someone could drive Sprout into a hedge or a ditch, or prevent it from working at all, so they are working with security researchers to address any vulnerabilities. Asparagus farming is unlikely to be a prime target, but Mr Chavasse believes **malicious hackers could threaten "mission critical" agricultural infrastructure.**

5.1.9 Health and Safety

This type identifies parts of the articles referring to health care, sanitation, and public safety. In particular, the Health and Security framing focuses on preventing internal harm, accidents, and illness through protective rules and care (e.g., prevention of gun violence, physical harm, infrastructure and building safety, environmental risks, etc.).

Example:

Main Topic: Lab-grown meat and insects

*The research, published in Nature Food, examined new foods that are expected to become a bigger part of our diets in future years, many of which rely on high-tech methods to "grow" animal and plant cells in bioreactors. The novel foods studied - some of which are still on the drawing board - were: Ground-up flies and crickets; Egg white from lab-grown chicken cells; A type of seaweed called kelp; Protein powders made from mushrooms or microbes; Edible algae; Milk, meat and berries grown from cells. Dr Asaf Tzachor of the University of Cambridge, who was not part of the research team, said while these are "promising" findings, the unwillingness of consumers to shift their diets might "postpone, or indeed prevent, this much-needed transition". Numerous studies have shown that **moving towards a plant-based diet has benefits for both health and the planet**. A recent report by the Intergovernmental Panel on Climate Change recommended a switch to balanced diets that are rich in plants like grains and vegetables, with a moderate intake of sustainably produced meat and dairy.*

5.1.10 Quality of Life

This type identifies parts of the articles referring to threats and opportunities for the individual's wealth, happiness, mobility, access to resources, quality of community life and well-being.

Example:

Main Topic: Climate crisis

*The climate crisis-induced disasters are among the most relevant dangers to human survival. Children, in particular, are at the receiving end. Today, an estimated 2.2 billion children worldwide are **growing up facing the impacts of the climate crisis**, even though they have the right to healthy and nutritious food, good physical, mental and social health, and access to knowledge. The climate crisis directly threatens these basic rights of children. India is the third most disaster-prone country globally, next only to United States (US) and China, with children comprising 40% of its population. Any disasters impact the most vulnerable people and their children disproportionately.*

5.1.11 Cultural Identity

This type identifies parts of the articles referring to traditions, customs, norms or values of a social group in relation to a policy issue, phenomenon, initiative or topic.

Example:

Main Topic: illegal immigration

*Critics of illegal immigration can make many cogent arguments to support the position that the U.S. Congress and the Colorado legislature must develop effective and well-enforced immigration policies that will restrict the number of people who migrate here legally and illegally. It's true that all forms of immigration **exert influence over our economic and cultural make-up**. In some ways, immigration improves our economy by adding labourers, taxpayers and consumers, and in other ways immigration detracts from our economy by increasing the number of students, health care recipients and other beneficiaries of public services. Some economists say that immigrants, legal and illegal, produce a net economic*

gain, while others say that they create a net loss. There are rational arguments to support both sides of this debate, and it's useful and educational to hear the varying positions.

5.1.12 Public Opinion

This type identifies parts of the articles referring to attitudes and opinions of the general public, including polling and demographics.

Example:

Main Topic: Deployment of renewables in France

Electric mobility is on the rise in France, but it is not growing as strongly as in other EU countries, such as the Netherlands and Norway, said Berghmans. This is partly due to delays in deploying charging infrastructure, as well as to insufficient incentives for the uptake of electric vehicles, he said. French citizens rely heavily on cars – with 75% using a car for their daily commute – and investments in cycling and public transport are lagging, he added. A carbon tax on fuel has been frozen since 2018, when a proposed hike triggered widespread protests and gave birth to the “gilets jaunes” movement. “The shadow of yellow vests still looms large. It’s likely Macron’s new government will remain extremely cautious about reintegrating the carbon tax to its arsenal of measures,” Lola Vallejo, climate programme director at Iddri, told Climate Home News. The country’s citizens’ assembly has identified mandatory minimum energy performance standards for buildings as a key measure to force deep renovation of buildings but this measure has been watered down by the government, said Makaroff. “Renovation efforts are still timid considering the triple menace of climate change, the cost of living crisis, and the Russia-Ukraine war,” Vallejo said.

“Public support for [this] is still insufficient and poorly targeted to the deep energy renovations that are needed to achieve climate targets,” said Berghmans. The government should offer more solutions and alternatives to poorer households, whose financial balances are directly impacted by rising fuel prices, he said.

5.1.13 Political

This type identifies parts of the articles referring to considerations related to politics and politicians, including lobbying, mentions of political manoeuvring, elections, and attempts to sway voters. In particular, this category covers explicit statements that a certain policy matter, initiative, phenomenon or activity is advantageous or disadvantageous for a particular political party or figure.

Example:

Main Topic: Australian climate policies

Still reliant on coal for most of its electricity, it is one of the dirtiest countries per capita - making up just over 1% of global emissions, but only 0.3% of the world’s population. It’s a massive global supplier of fossil fuels, and once that is factored in, it accounts for 3.6% of the world’s emissions. But it’s also one of the nations most at risk from climate change. In recent years, Australia has suffered severe drought, historic bushfires, successive years of record-breaking floods, and six mass bleaching events on the Great Barrier Reef. And it’s racing towards a future full of similar disasters, the latest UN Intergovernmental Panel on Climate Change (IPCC) report warns. The current government has angered allies with its short-term emissions reductions target - which is half what the IPCC says is needed if the world has any chance of limiting warming to 1.5C. But Australia is still wedded to fossil fuels and climate policy has famously played a role in toppling three prime ministers in a decade. Though most voters want tougher climate action, some coal towns lie in swing constituencies that are key to winning elections.

5.1.14 External Regulation and Reputation

This type identifies parts of the articles referring to international reputation or foreign policy of a country, e.g., external relations with another nation, international organization or geo-political entity, relations between groups of countries.

Example:

Main Topic: Covid-19 cases in North Korea

It seems North Korea is where much of the world was back in early 2020. Covid is spreading rapidly through the population which is not vaccinated, has no built-up immunity, and has limited options to treat the virus. The difference of course is that North Korea has had time to prepare for this and has seemingly done little to do so. Instead, it has focussed on its strategy of preventing the virus from entering the country. It has turned down vaccines in the past saying it didn't need them. Now it does need them, but it might be too late. Health experts say the urgent priority is getting antiviral drugs into the country to treat people who are suffering. But in order for this to happen, North Korea needs to accept help, and it is yet to ask for any. South Korea's offers of vaccines and aid have gone unanswered.

It is extremely unlikely the North would ever accept help from South Korea. It will be far more palatable if the offer comes from an international organisation such as the United Nations, even if that means South Korea's supplies need to be redirected and packaged up in this way.

It is a risk for North Korea to accept aid and medical care because it means they would have to let people into the country to distribute and administer it. But the fact that it is reporting its daily deaths and case numbers is seen as an indication that it needs and wants help.

5.2 Framings in Images

In the context of this task, we adhere to the same definition of framing as above, now applied to images.

Please adhere to the following rules when annotating frames in images:

1. The image is the main object of annotation, but the image should be interpreted with reference to the text of the news article.
2. One should identify what is the main topic of the news article (e.g., some event, activity, initiative, phenomenon, entity, etc.) - which is covered in the process of annotating the text (Subtask 1), and consequently identify the frames in the image from the perspective of that topic.
3. An image can be annotated with multiple framing dimensions, if relevant, and those need not be the same or overlapping with the framing dimensions identified for the text of the news article.
4. For every framing dimension identified, a free-text explanation must be provided. This explanation can be brief and should directly refer to something observable in the image.

5.3 Additional annotations (not related to the tasks)

The annotation of the texts of the news articles should also encompass an additional **FREE TEXT** field at document level to provide information on the **Main topic (subject matter)**, which could be centred around an event, activity, phenomenon, entity, policy, relationship, etc.

As regards images, we envisage an additional field at document level to label **Emotion of the image:**, whose value is one of the following: *fascination, interest, sadness, anger, disgust, shame, guilt, being touched*. In this context, the idea is to label the type of emotion the author of the article intended to convey.

6 Inception

JP: Detail on how to use Inception: THIS IS JUST A DRAFT

- Documents in Inception are sorted in such a way that plain text documents come before an HTML version of the text with the image.
- The plain text version of the news articles should be annotated first, before the version with the image is annotated.

- Start the annotation of the text version by choosing the **Main Topic** layer (upper-right corner), and highlight a text fragment that mentions the topic and fill in the **main_topic_description** free-text field accordingly.
- Switch to the **Framing** layer and continue with annotating frames (as described earlier in the annotation guidelines - see XXX).
- Move on to the next document, which contains HTML version of the text with an image.
- In an analogous manner, annotate the framings of the image.
- Finally, switch to **Emotion** layer, and add emotion labels by selecting values in the **emotion** drop-down list field accordingly.
